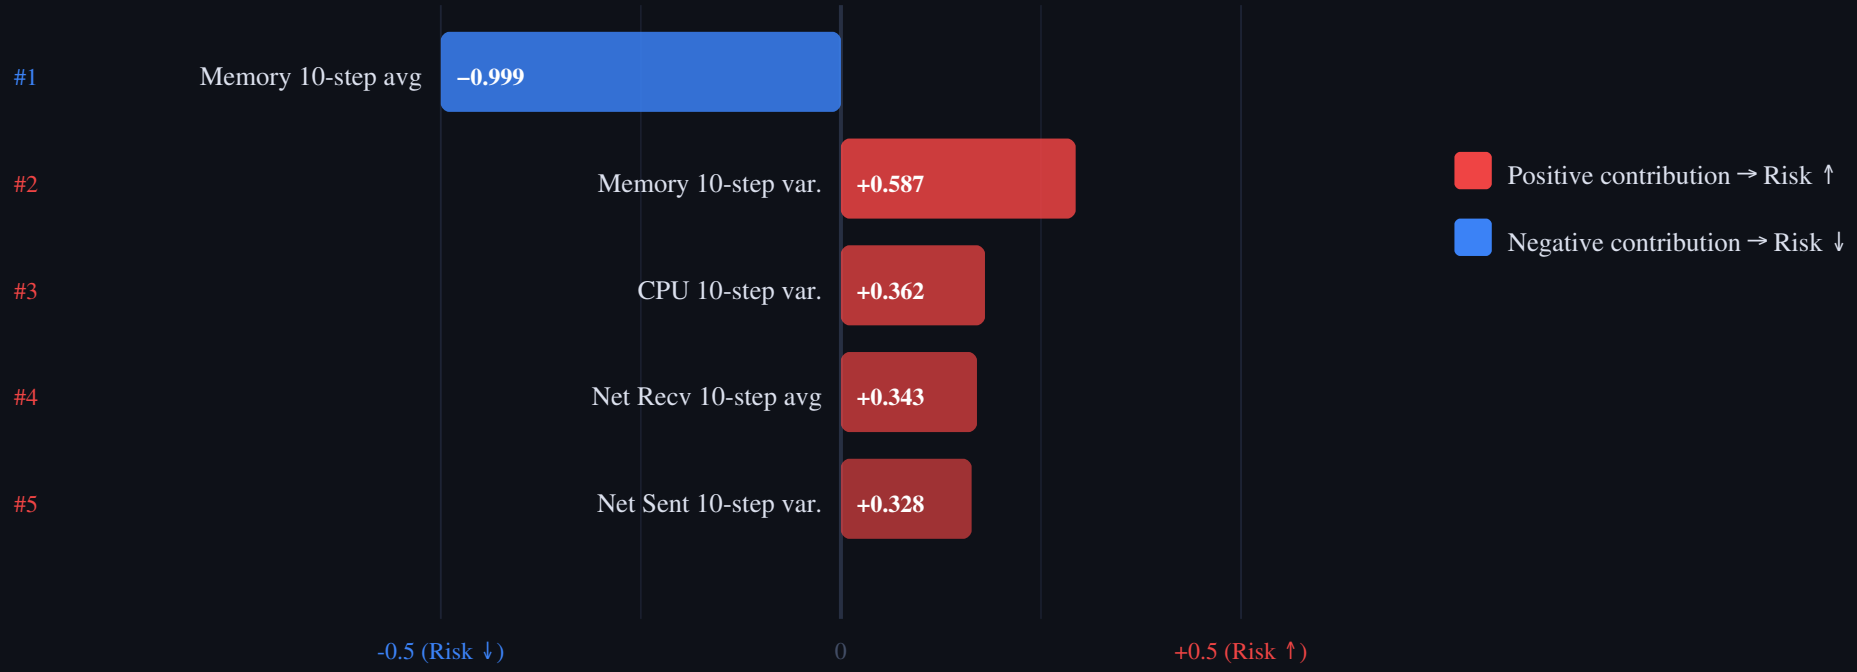

Figure 3 — XAI Feature Contributions (Case A: Gradual Disk Exhaustion)

Contribution = scaled_feature_value × LR_coefficient | Risk Score: 0.591 | Category: Combined Failure

Source: results/xai_case_study_results.json (test_1, disk_gradual_exhaustion). Contribution = StandardScaler(value) × LR coefficient.

Method: deterministic linear attribution (not SHAP / not LIME). Bar width proportional to absolute contribution value.
