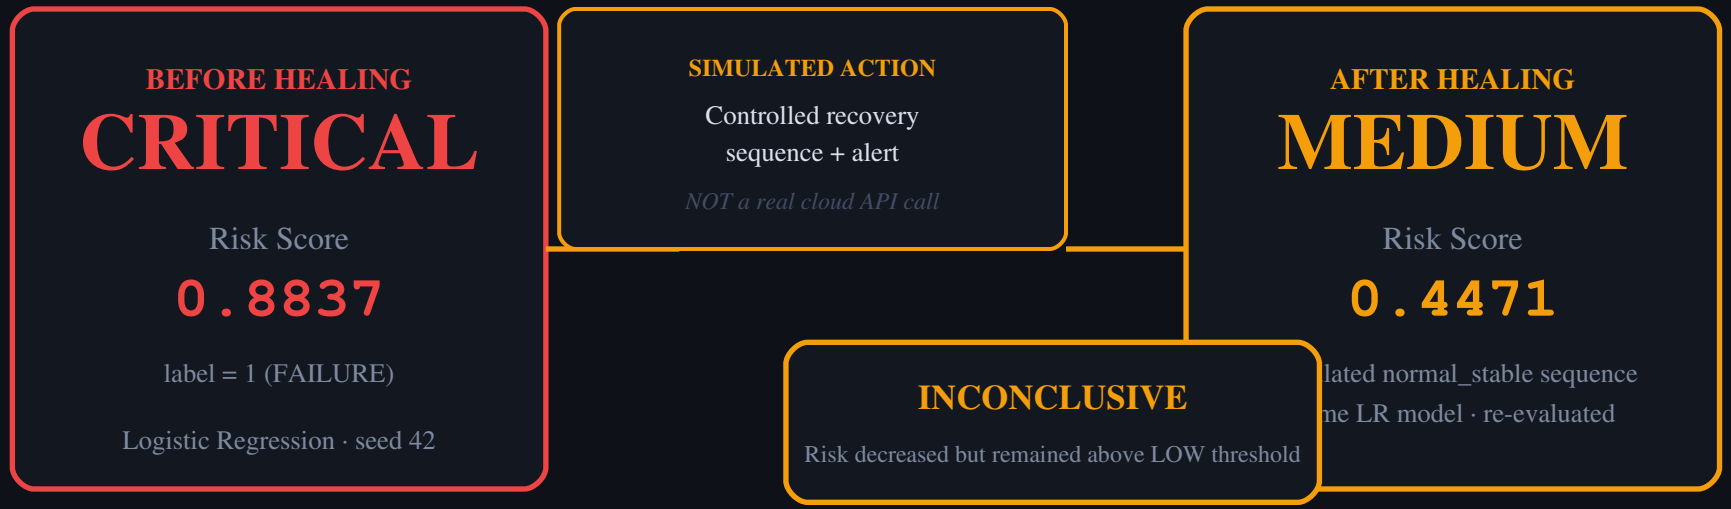

Figure 4 — Recovery Verification: Before / Healing / After

Scenario: Network Degradation | Post-healing telemetry: simulated normal_stable | Model: Logistic Regression

▼ 49.4% reduction in risk score

0.884 → 0.447. MEDIUM does not satisfy RECOVERED (requires LOW ≤ 0.25)

The system correctly declines to report RECOVERED when meaningful risk remains. This demonstrates the conservatism of the three-class verification scheme.
